Key influencers Top segments

What influences Profitability Status to be Low Margin ?

AI-Assisted Insight Summary

Power BI's Key Influencers analysis shows that Electronics is the strongest driver of Low Margin, making products in this category 8.08x more likely to fall into the Low Margin group. High-discount transactions, especially the 20%+ discount band, also increase the likelihood of Low Margin.

These AI-assisted findings support the SQL and dashboard analysis: revenue growth is strong, but profitability is being pressured by product mix, discounting, and return-related costs. The business should focus on Electronics margin improvement, discount control, and profit-based sales performance tracking.

Recommended Business Actions

1. Review Electronics pricing and cost structure because the AI analysis shows Electronics is strongly associated with Low Margin.
2. Reduce unnecessary discounts above 20%, as high-discount transactions increase the likelihood of Low Margin.
3. Review Corporate Sales discounting because the channel drives strong revenue but has weaker profitability.
4. Investigate Electronics return drivers, especially defective and compatibility-related returns.
5. Evaluate sales reps using profit attainment, not only revenue attainment.
